# **Full Midterm Project Process**

#### Applied Human Computerer Interaction

#### Project and Portfolio III

Project and Portfolio IIIIII

- Pre Production
  - O Design
    Document
  - Product Backlog
- AHI Topics
  - Nielsen's heuristics
  - Usability
  - O UX

- Core Functionality
  - Critical game systems
  - O Interface and UI creation
- First Use/Playable
  - Playable complete
     Experience
  - O Fun factor

- Alpha
  - Full Functionality
  - Example Content
- Beta
  - Content complete
  - Balancing
- Finalizing
  - QA process
  - Presentation

# Midterm Project Grading

# **Grading Scale: Overall Grade**

Your overall grade is a combination of a few sections

- Team Evaluation
- Personal Evaluation
- GPS

# **Grading Scale: Team Evaluation**

#### **Team Grade**

- The team portion of your grade represents the total team accomplishments during the project as a whole.
- Each milestone is graded on its own based on the sprint goals from that milestone
  - During Alpha are all the features completed?
  - During Beta did we replace all placeholders?

#### ALPHA MILESTONE GOALS BELOW All Features necessary to Is fully achieved Is nearly complete Is worked on but not Little work is done Is completely complete the game are achieved on the task missing Is partially achieved completed and integrated Is not achieved 40 points The game world is populated Is fully achieved Is nearly complete Is worked on but not Little work is done Is completely with at least 1 example of achieved on the task missing Is partially achieved each game object (all game Is not achieved object types) 30 points Little work is done Overall game progress can be Is fully achieved Is nearly complete Is worked on but not Is completely shown (e.g., multiple levels, on the task missing achieved Is partially achieved multiple objectives) Is not achieved 20 points Is fully achieved Is worked on but not Little work is done Is completely The game contains win/loss Is nearly complete conditions achieved on the task missing Is partially achieved

## Grading Scale: Personal Evaluation

#### Personal Tasks

- Based on completion of the work that you commit to for the duration of the project.
  - Personal Tasks Completed
    - Completed all assigned userstories with a high level of quality and integrated into the build.
  - Team Practices
    - Updated task board tasks and completed peer reviews of completed userstories.

#### ALPHA PERSONAL CONTRIBUTION

#### SPRINT PERSONAL EVALUATION

CRITERIA	EXCELLENT 100%	SATISFACTORY 80%	NEAR STANDARDS 60%	BELOW STANDARDS 40%	INSUFFICIENT 0%
Personal Tasks Complete Completes the expected amount of work toward the project while maintaining a high level of quality	Completes all assigned tasks while maintaining a high level of quality of work	Does not complete all tasks assigned or has significant issues in quality	Completes an insufficient amount of tasks on the project	Completes little to no tasks on the project	Does not work on the project
70%	Completes all assigned tasks while assigned tasks while maintaining a high level of quality of work  Keeps the scrum board accurate and work clean Cournets time sker Spent on work Quickly assists in Cournets where the control work of the cournets time sker Spent on work Quickly assists in Cournets and the cournets time sker Spent on work and peer review teammates work completes and insufficient amount in consistently updates tasks, documents time spent on work teammates work completes and insufficient amount of tasks on the project of tasks on the project of tasks, documents time spent on tasks, completes an insufficient amount of tasks on the project of tasks on the pr				
Team Practices Updates task-board tasks on the scrum board showing work progress and completes peer reviews on teammates' tasks	board accurate and clean Documents time spent on work	to update the task board to show work and peer review		Does not update the task board timely enough for use	Never updates the task board

# **Grading Scale: GPS**

#### Professionalism

- The faculty reserves the right to identify what is considered unprofessional and what constitutes a breach of the assignment.
- Common GPS problems include
  - Not complying with imperatives from assigned by CDs
  - Refusal to cooperate with the project methodologies
  - If you choose to come in and work during the other lecture or lab period and are loud or disruptive during the other class' lecture
  - Being off task during free work hours

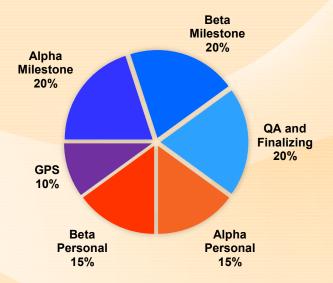

# **Grading Scale: PP3 Weighting**

#### **Overall Weighting**

- Project Milestones (Team): 60%
- Personal tasks: 30%

• GPS: 10%

# Schedule

## **Full Time**

#### This is your only class for a reason

- (other than the career module)
- We are now full time dev on this project
- You need to work on the project every day
- Stay in contact with us and keep communication open

## **Attendance**

Students can miss 10% of their class time unexcused

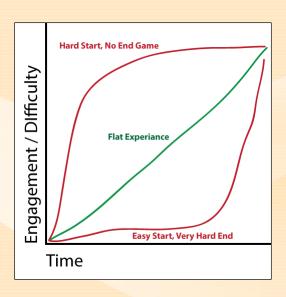

- The class has 8 lectures (1 lecture is 12.5%)
- This means you can't miss a full lecture without getting the hours excused

Excused hours requires 2 things

- An excusable reason for missing the hours
- Work from the missing hours completed

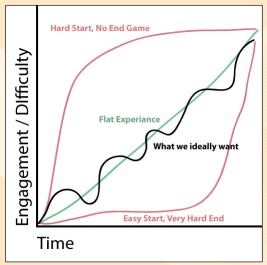

# IPM Documents and Difficulty Curves

A plotting of the challenges the user faces while playing a game, against the time that that user has used the product

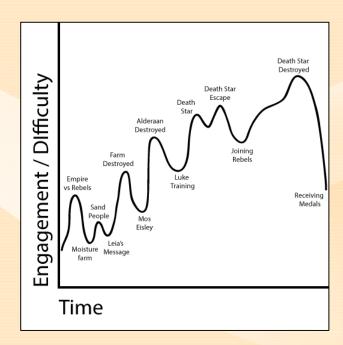

#### Ideally

- Never feel bored and neverfeel overwhelmed
- Pace the challenges evenly through the product

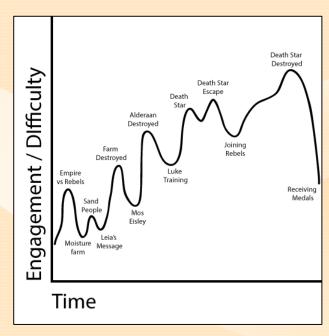

There is a similar concept to this in general entertainment based on viewer engagement called the dramatic arc

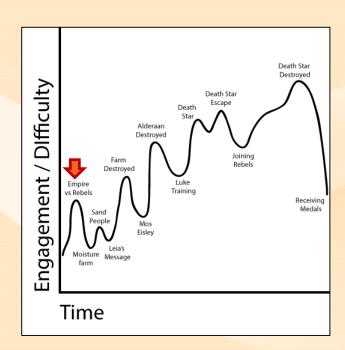

#### Not a flat line of experiences

 A series of peaks and valleys with few plateaus

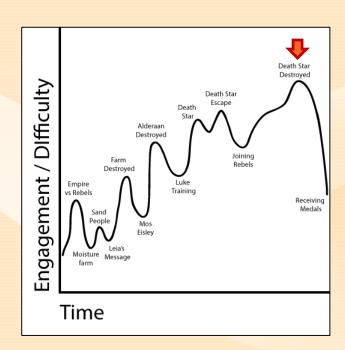

Start with something to hook the audience

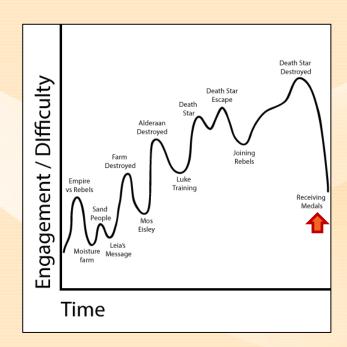

Continuous dipping and building back up to keep the audience engaged

Reach the peak at the most opportune moment

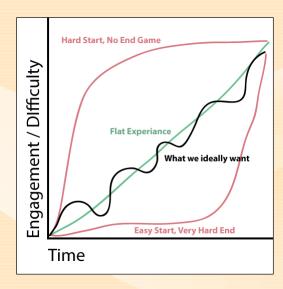

Allow the audience to come back down to wrap up the experience

We have to ensure that we do not drop it on our player all at once

- Avoid overwhelming them
- Avoid boring them

You can't expect this curve to just appear and feel natural in the game automatically

- It takes conscious thought and focus to make it happen
- Document it
- Find faults
- Fix them before wasting time

The difficulty that the player encounters when playing a game should be gradual

- Phases of increased difficulty (Introduction)
- Periods of normalcy (Practice)
- Dips in difficulty due to the player becoming acclimated (Mastery)

Then cycling through the phases as more challenges are added in front of the player

# Difficulty Curve: Example Items

Control mechanics or player abilities

- Where is it explained to the user?
- Where can they fumble and make mistakes without dire consequences?
- When do we expect the player to experiment with subtleties in the controls?
- When does that control become second nature to them?

# Difficulty Curve: Example Items

#### Types of enemy

- When does the player first encounter it?
- Where can the player acclimate themselves to the scenario's the enemies create?
- When does the player feel like they are in total control again?
- When does the player feel uninterested with an enemy?

# Difficulty Curve: Example Items

#### Types of obstacles

- When does the player first encounter it?
- Where can the player acclimate themselves to the different ways the obstacle can function
- When does the player feel confidant in traversing the obstacles?

## **IPM Document**

List out all points of interest and make that one axis of our chart.

- Mechanics
- Challenges
- Control schemes
- Enemy types
- Weapon types
- Item types
- ...
- Any potential stumbling point for the player

						Sta	age				
Point of Interest	Complexity (1-10)	1	2	3	4	5	6	7	8	9	10
Player Movement	1	1	Р	M							
Precision Jumping	4		- 1			M					
Double Jump	2			1		M					
Fireball	2		- 1	M							
Dash	3				- 1	Р	Р	M			
Dash Attack	5						I	Р	Р	Р	M
Enemy Dude	2	I	Р	Р	М						
Enemy Ninja	6			1	Р	Р	М				
	Total	3	9	13	11	15	14	8	5	5	5

## **IPM Document**

The other axis lists out the time table of our users' experiences in whatever best fits our product

- Playable levels/stages
- Character level
- Time spent in game
- (Not all at once in a tutorial level)

			T		Π,	T		T,	1	•	
					<b>—</b>	Sta	age				
Point of Interest	Complexity (1-10)	1	2	3	4	5	6	7	8	9	10
Player Movement	1	- 1	Р	M							
Precision Jumping	4		- 1			М					
Double Jump	2			- 1		М					
Fireball	2		- 1	M							
Dash	3				- 1	Р	Р	M			
Dash Attack	5						ı	Р	Р	Р	M
Enemy Dude	2	ı	Р	Р	М						
Enemy Ninja	6			1	Р	Р	M				
	Total	3	9	13	11	15	14	8	5	5	5

## **IPM Document**

Define, for each of points of interest,

- When they are introduced to the user
- When does the user put it in practice
- When is the user expected to have mastered it

						Sta	age				
Point of Interest	Complexity (1-10)	1	2	3	4	5	6	7	8	9	10
Player Movement	1	1	Р	M							
Precision Jumping	4		JL			М					
Double Jump	2					М					
Fireball	2		- 1	M							
Dash	3				- 1	Р	Р	M			
Dash Attack	5						I	Р	P	Р	M
Enemy Dude	2	I	P	Р	M						
Enemy Ninja	6			1		Р	М				
	Total			13	11	15	14	8	5	5	5

Understanding the game

 The act of creating this documents helps teams understand the depth and breadth of the game's challenges

#### Graphic representation of difficulty

 From the IPM matrix a graphical representation of our overall learning/engagement curve can be generated.

						Sta	age						
Point of Interest	Complexity (1-10	0) 1	2	3	4	5	6	7	8	9	10		
Player Movement	1	1	P	М									
Precision Jumping	4	1	Р	M									
Double Jump	2	ı	P	M									
Fireball	2	I	P	M									
Dash	3	I	P	M									
Dash Attack	5	I	P	M									
Enemy Dude	2	I	Р	М									
Enemy Ninja	6		- 1	Р	M								
	Total	19	25	25	6	0	0	0	0	0	0		
Please note this IPM and curve is very subjective and not official. Creation and use of a IMP and curve is a useful tool in design but not a definitive answer.	30 25 20 15 10 5 0	1	2	3	4	5	PM Cu	7 7	8	9	10	—— IPM	Curve

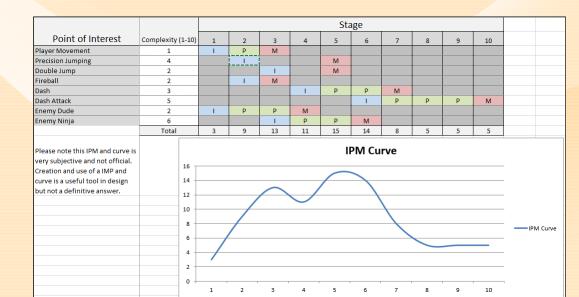

#### Discover hot spots

 With that curve we can see if there are any points of the curve that the slope is too aggressive or if at any point the game becomes stagnant.

						Sta	age					
Point of Interest	Complexity (1-10)	1	2	3	4	5	6	7	8	9	10	
Player Movement	1	I	P	M								
Precision Jumping	4	I	P	M								
Double Jump	2	ı	P	M								
Fireball	2	ı	Р	M								
Dash	3	ı	P	M								
Dash Attack	5	ı	P	M								
Enemy Dude	2	ı	Р	M								
Enemy Ninja	6		- 1	Р	M							
	Total	19	25	25	6	0	0	0	0	0	0	
Please note this IPM and curve is very subjective and not official. Creation and use of a IMP and curve is a useful tool in design but not a definitive answer.	25 - 20 - 15 - 10 - 5 - 0 - 5	1	2	3	4		PM Cu	7	8	9	10	IPM Curve

#### Spread out challenge

 The challenges can then be redistributed to make for a more even and engaging user experience

#### Discover gaps in the overall game

 Helps the team discover when there is a lack of content variety and push for more advanced gameplay

						Sta	age				
Point of Interest	Complexity (1-10)	1	2	3	4	5	6	7	8	9	10
Player Movement	1	- 1	Р	M							
Precision Jumping	4		ı			M					
Double Jump	2			- 1		M					
Fireball	2		I	M							
Dash	3				1	P	P	M			
Dash Attack	5						I	P	P	P	M
Enemy Dude	2	ı	Р	Р	M						
Enemy Ninja	6			1	P	P	M				
Pusher wall	5				- 1			P		М	
Enemy Samurai	8							ı	Р	M	
Big Boss Battle	10										M
	Total	3	9	13	16	15	14	21	13	18	15
Please note this IPM and curve is very subjective and not official. Creation and use of a IMP and curve is a useful tool in design but not a definitive answer.	25 7

#### Use in level design

- A level designer uses the chart by looking down at the level they are going to create and knows what features they are responsible for.
- Breaks "blank canvas paralysis" as it pertains to level design

## How an IPM is used

## Use in level design

 A level designer uses the chart by looking down at the level they are going to create and knows what features they are responsible for.

## Stage 6

- Mastery of the enemy ninja
- Practicing dash movement
- Introduction to the dash attack
- Other features available but not planned for use

		Stage										
Point of Interest	Complexity (1-10)	1	2	3	4	5	6	7	8	9	10	
Player Movement	1	1	Р	М								
Precision Jumping	4		ı			M						
Double Jump	2			- 1		M						
Fireball	2		ı	М								
Dash	3				- 1	Р	Р	М				
Dash Attack	5						ı	Р	Р	Р	М	
Enemy Dude	2	ı	Р	Р	М							
Enemy Ninja	6			- 1	Р	Р	M					
Pusher wall	5			***************************************	- 1			Р		М		
Enemy Samurai	8			***************************************				ı	Р	М		
Big Boss Battle	10			***************************************							М	
_	Total	3	9	13	16	15	14	21	13	18	15	
Please note this IPM and curve is very subjective and not official.		IPNurve										

# Part of Alpha

## Create this document during alpha

- During alpha we will be finalizing our features
- This document will help us pace it out
- Won't be fully executed until beta

# Where are we now?

# <Activity> Playtesting

30 minutes to play each others games

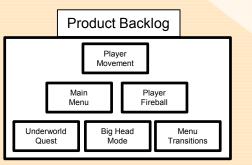

- Watch for what people find fun
- Watch for what people find frustrating
- Is the experience what you wanted it to be?

# Sprint Process REVIEW

# Product backlog

Everything that could be in the product is collected into a list called the product back log

- Things can get added to the product back log as needed
- Only a wish list for now, Not promises that need to be fulfilled

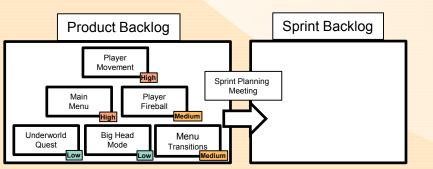

# **Sprint Backlog**

## **Sprint Planning**

- Before the sprint the entire team will meet to:
  - Determine an overall sprint goal
  - Select stories from the product back log to achieve that goal
  - Evaluate the difficulty/hours/complexity of the stories selected
  - Distributing the work load among the team

# Planning poker

After the userstories have been selected each userstory is evaluated individually by the group.

- Estimating workload
- Understanding dependencies
- Assigning tasks

# Planning poker: Step 1: Bidding

## Step 1: Bidding

- Userstory and test cases is read out to the team
  - Answers questions if there are any
  - Modify test cases where needed
    - (Client is involved in this for externally produced projects)
- Each team member
  - Evaluates how difficult they believe the story is to completing, without bias from other members
  - Pick which of the possible bids best represents how difficult they evaluate the task to be

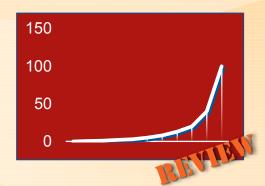

# Planning poker: Step 1: Bidding

#### Bid Value: Estimated Work

- 0 hr
- ½ hr
- 1 hr
- 2 hrs
- 3 hrs
- 5 hrs
- 8 hrs
- 13 hrs (1 day and a half)

- 20 hrs (half a week)
- 40 hrs (1 week)
- 100 hrs (2 weeks)
- Unknown
- Infinite

- The number pattern reflects one of the faults in making estimates
- The larger the estimate the more room for error

# Planning poker: Step 1: Bidding

Bid Value: Estimated Work

- 0 hr
- ½ hr
- 1 hr
- 2 hrs
- 3 hrs
- 5 hrs
- 8 hrs
- 13 hrs (1 day and a half)

- 20 hrs (half a week)
- 40 hrs (1 week)
- 100 hrs (2 weeks)
- Unknown
- Infinite
- Each value should be through as a range from the bid below it up
  - Bid of 5 = anything above 3 up to 5

1	2	3	4	5	6	7	8	9	10	11	12	13	
1	2	3	5			8		13					

# Planning poker: Step 2: Negotiation

## Step 2: Negotiation

- Each team member reveals what bid they decided upon on the previous step at the same time
- If bids differ the team must discuss why and come to an agreement on the task's value

# Planning poker: Step 3: Allocation

## Step 3: Allocation

- After every user story has agreed upon values, user stories must have owners committed to them.
- The story's owner will be the person
  - Best equipped to tackle the story
  - Responsible for completing all task related to the story before the end of the sprint

## Planning poker: Step 3: Allocation

### Balance the workload

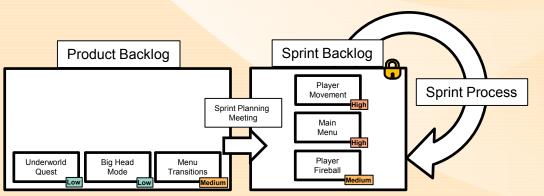

- Make sure each team member is contributing equally
  - O Redistribute stories if they are not
- Make sure the work load matches up with the sprint length
  - Not enough hours to fill the schedule = take more stories from the product backlog
  - Over hours = Discusswith the product owner to return things to pull back on the sprint goal

# **Sprint Backlog**

## **Sprint Planning**

- Once the sprint planning is completed and the sprint has started a commitment has been made for those tasks
- Neither the product owner nor the developers should change a sprint plan once in motion

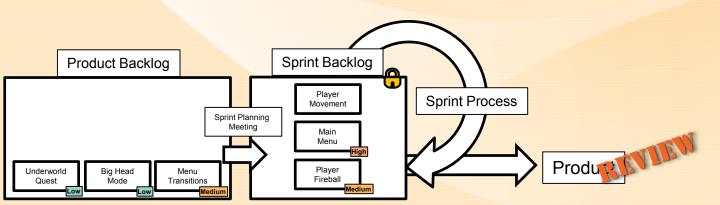

# **Sprint Process**

Teams then work through the sprint to complete the agreed upon tasks

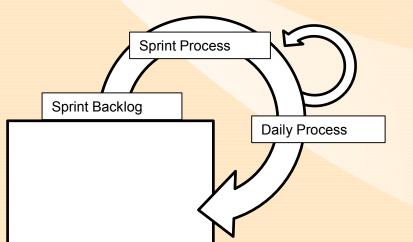

- Completing the tasks
- Integrating into the master build

# Work day in scrum

Teams meet every day for a scrum "stand up" meeting

- Maintain transparency
- Hold each other accountable
- Set up help when needed

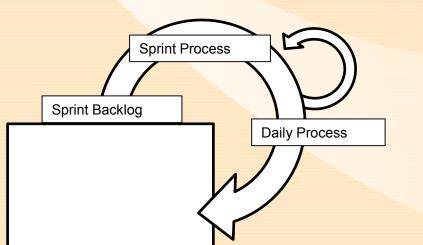

# Work day in scrum

Key points of scrum "stand up" meetings

- The meeting should be the start of our working day
- Maximum of 15 minutes.

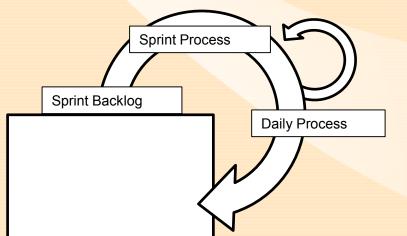

# Work day in scrum

The daily meeting needs to answer the following for each team member

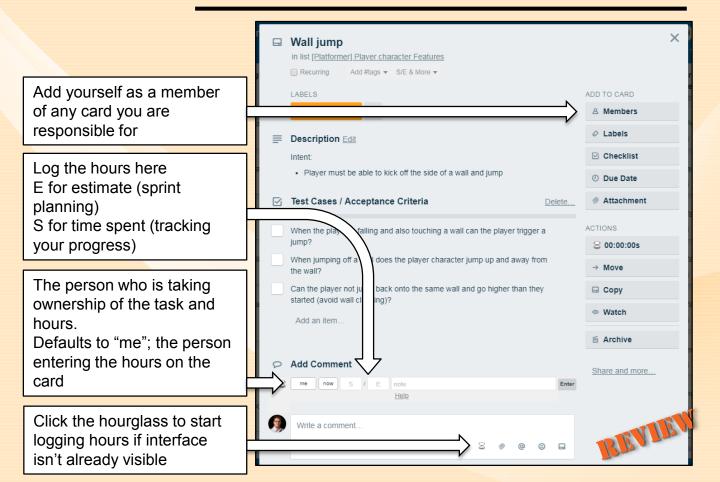

- What did you do?
- What are you about to do?
- What currently stands in your way?

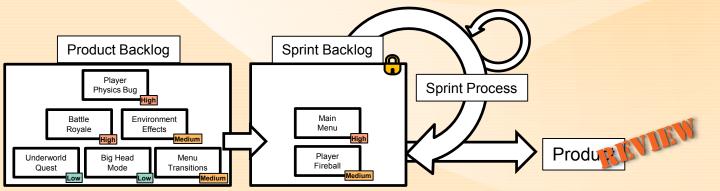

# Logging Hours with Trello

# **Sprint Process**

During the sprint, things are added to the product backlog if

- Discovered to make the product better
- Added from outside influences
- Changes in product expectation from client

# Todos for today

# **Sprint Planning**

#### To Dos

## Sprint planning

- Understand an overall sprint goal
- Select stories from the product backlog to achieve that goal
- Move the selected userstories to this sprint board
- Reviewed and edit test cases and task lists where needed based on the shifting vision of the game
- Evaluate the difficulty/hours/complexity of the stories selected through planning poker
- Distributing the workload among the team by assigning owners for all of the stories
- Sprint plan must be reviewed and accepted by the CD before the end of lab

# **Alpha Sprint Goals**

## **Sprint Goals**

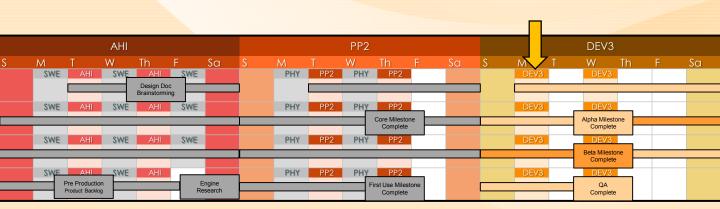

- The game world is populated with at least one example of each game object
  - All game object types
- Overall game progress can be shown
  - o (multiple levels, multiple objectives...)
- The game contains its win/loss conditions
- Clear Technical debt
- Feature complete
  - Enough asset creation complete to prove the use of features
- Any feature not completed by the end of this sprint must be cut from the product

## Schedule

## Hourly commitment

- 6 dedicated work days
- ~48 hours a person

Sprint review day 4 of PP3

# Alpha Sprint

## **Sprint Goals**

- The game world is populated with at least one example of each game object
  - All game object types
- Overall game progress can be shown
  - o (multiple levels, multiple objectives...)
- The game contains its win/loss conditions
- Clear Technical debt
- Feature complete
  - Enough asset creation complete to prove the use of features
- Any feature not completed by the end of this sprint must be cut from the product

## Hourly commitment

- 6 dedicated work days
- ~48 hours a person
